

CHAS-333

SWANN HOUSE

late 18th century

Private

Restored to its original appearance, the Swann House would accurately represent the type of dwellings built and inhabited by a large percentage of the region's less economically prosperous families. As recently as the first half of this century many hundreds of these buildings remained, but they are no longer such a prominent feature of the landscape.

Although it has experienced numerous alterations, the Swann House retains a sufficient amount of its original fabric to facilitate an accurate restoration on paper. A two-room house (the room configuration was later altered to its present center hall, three-room plan), it once had end chimneys, a riven claboard sheathed exterior, and exposed eaves utilizing the regionally typical "false" plate. The interior was plastered, displaying such popular details as beaded baseboards and simple, two-piece chairrails. Although similar in detail, the Swann House is less refined than "Mt. Pleasant," (CH-208), or the "Trinity Lake House," (CH-294), as evidenced by its far simpler interior and rough azed rather than dressed and beaded exposed ceiling joists.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Although at first appearing to be little more than a regionally typical tenant farmer's house, and offering no exterior features to indicate otherwise, the Swann House is nevertheless believed to be the second oldest structure within a one-mile radius of the town of La Plata.

The Swann House, whose name derives from its last occupants, was probably built in the late-eighteenth century. Facing east and measuring approximately thirty by eighteen feet, the house is of frame, one story plus attic beneath a gable roof. Its original plan included two ground floor rooms, later altered to three rooms and a center hall, and two attic bedchambers. On the exterior the house is three bays wide on both side elevations, having centered doors flanked by small windows. Originally, the exterior walls (and possibly the roof) were sheathed with riven clapboards (short lengths of hand-split oak boards). Single chimneys that once stood at each end of the house provided fireplaces on both floor levels. There is no discernable evidence to indicate that the roof had dormers, although their former existence is possible. The roof framing employs tilted "false" or secondary wall plates, a type of eaves construction that was always exposed on the exterior.

On the interior the rooms were originally finished with plastered walls, simple two-piece chairrails and beaded baseboards, much of which remains. The type of trim used to face the windows and doors, however, is unknown since none survive. The ceilings of the two first floor rooms display exposed, rough azed joists and the attic flooring above, once painted but now smoke backened. No original woodwork or plaster remains in the attic level.

In the early nineteenth century the north end chimney was removed when the north, first floor room was partitioned to provide a center hall and two small rooms. It was at this time that the original stair was replaced with the existing one--a narrow enclosed affair with winders located in the northeast corner of the hall. The rear stair wall and soffit, exposed in the northwest first floor room, retain their beaded board sheathing.

At a later date the riven boards covering the exterior were removed and some of the boards reused to cover the walls, floor to ceiling, of the northeast first floor room. The original floor was also covered over with planked boards, as were the walls and ceilings of the attic chambers. Both chimneys were replaced with narrow, interior stove chimneys. In more recent years the whole of the exterior, walls and roof, were covered with galvanized tin.
